SUMMARY

Data Science learner and full-stack builder specializing in Python, machine learning, and scalable web applications. Experienced in data manipulation with NumPy and Pandas, building production-ready applications with React and Node.js, and prompt engineering for AI systems. Passionate about extracting insights from data and deploying end-to-end ML solutions.

EDUCATION

IPS Academy Indore

Bachelor of Computer Applications (BCA) in Computer Science

Indore, Madhya Pradesh

2024 – 2027

TECHNICAL SKILLS

Programming Languages: Python, JavaScript

Data Science & ML: NumPy, Pandas, Data Analysis

Web Development: React.js, MongoDB, HTML5, CSS3, Tailwind CSS

AI & Automation: Prompt Engineering, AI Integration

Tools & Platforms: Git, GitHub, MongoDB Atlas, Vercel, REST APIs

Core Competencies: Data Visualization, Full-Stack Development With Ai, Problem Solving

PROJECTS

NumPy Interactive Learning Demo | *Python, NumPy, Web Integration*

2024

- Developed an interactive educational platform demonstrating NumPy array operations, reshaping, and indexing for data science beginners
- Created hands-on tutorials with live code examples to simplify complex data manipulation concepts
- Designed user-friendly interface to enhance learning experience for aspiring data scientists

Full-Stack Loan Management Application | *React, Node.js, MongoDB, Authentication*

2024

- Built comprehensive loan management system with user authentication, loan request workflows, and admin dashboard
- Implemented secure RESTful APIs for data processing and integrated MongoDB Atlas for scalable database management
- Designed role-based access control (RBAC) ensuring data security and proper authorization flows
- Deployed production-ready application with responsive UI and optimized backend performance

E-Commerce Platform (Client Project) | *React, Node.js, MongoDB, Payment Integration*

2024

- Developed and delivered full-featured e-commerce solution with product management, shopping cart, and checkout system
- Integrated payment gateway and order tracking functionality for seamless customer experience
- Successfully sold and deployed platform to client, managing full project lifecycle from requirements to delivery
- Implemented inventory management system and analytics dashboard for business insights

Data Science Tutorial Series | *Python, Pandas, Data Visualization*

2024

- Created comprehensive tutorials and walkthroughs covering NumPy basics, Pandas operations, and end-to-end projects
- Documented data cleaning, transformation, and visualization techniques for real-world datasets
- Built learning resources to help others transition into data science and analytics roles

CERTIFICATIONS

Tata Data Visualisation: Empowering Business with Effective Insights

Tata Group

- Completed job simulation focused on translating business requirements into data-driven insights
- Gained expertise in data visualization best practices and communicating technical findings to stakeholders

ADDITIONAL EXPERIENCE

Prompt Engineering Specialist	Ongoing
• Specialized in designing effective prompts for Large Language Models to solve production-level tasks • Developed AI-powered workflows integrating LLMs with full-stack applications • Optimized model outputs for accuracy, relevance, and performance in real-world scenarios
